

August 27, 1985

TO: File

FROM: Everett Hooper, Reclamation Soils Specialist 

RE: Southwestern Portland Cement Company, Silica #1,
DOE/023/017, Juab County, Utah

On August 22, 1985, Everett Hooper met with Mr. Byard Kershaw, Bureau of Land Management Geologist, from the Filmore office. The meeting was held on the Southwestern Portland Cement Silica #1 site to assess the actual size of disturbance. There is no doubt the area has exceeded the requirements necessary to remain under the Declaration of Exemption status. The area of actual disturbance is somewhere in the neighborhood of five acres. A pit and highwall approximately 1.5 to 2 acres have been constructed with an additional area of approximately three acres that has had the vegetation removed in preparation for pit advancement.

Mr. Douglas Y. MacIver should be contacted and informed that Southwestern Portland Cement must file a MR-1 Form, and proceed with permitting the operation.
